Generative Engine Optimization (GEO) Audit

Target: https://tekjee.com/ | **Audit Date:** September 22, 2026 | **Framework:** GEO-Audit Standard v2.4

OVERALL GEO INDEX

36 / 100

Scale: 0 - 100

TIER 4: AT RISK / LOW CITABILITY

The site has strong Server-Side Rendering (SSR) foundations via LiteSpeed, but suffers from critical schema entity identity errors (tagged as 'admin'), missing machine protocols (no /llms.txt), sitemap routing bugs in robots.txt, and keyword-stuffing patterns that degrade LLM citations.

1. Executive Summary

This audit evaluates **tekjee.com** across the 5 fundamental dimensions of Generative Engine Optimization: its ability to be systematically discovered, parsed, understood, and cited by AI answer engines (ChatGPT Search, Perplexity, Google AI Overviews, Claude, and Gemini).

While traditional SEO focused on keywords and backlinks, generative search systems rely on **Retrieval-Augmented Generation (RAG)**, entity graphs, and grounded facts. Currently, **tekjee.com is severely penalized** by foundational entity misconfigurations. The site's Schema.org markup lists the primary publisher entity as **'admin'**, assigns an animated form loader GIF/SVG as its corporate image, and provides an email address as its meta description. Furthermore, modern AI protocols such as /llms.txt are absent, and robots.txt points AI bots to a stale 1-URL sitemap. With simple targeted interventions, the domain can rapidly ascend to Tier 2.

2. GEO Scorecard Matrix

Pillar	Score	Weight	Status	Core Diagnostic Finding
1. AI Ingestion & Crawlability	16 / 20	20%	**PASS***	LiteSpeed SSR provides full body text without JS; robots.txt open but lacks AI rules.
2. Machine Context (llms.txt)	1 / 20	20%	**FAIL**	/llms.txt returns 404; robots.txt links to a broken 1-URL sitemap vs sitemap_index.xml.
3. RAG Citation Architecture	12 / 30	30%	**WARN**	FAQs present; but abstract hero copy, missing SLAs/data, typos ('Trafic'), author 'admin'.
4. Entity Grounding & Schema	5 / 20	20%	**FAIL**	JSON-LD identifies company as 'admin'; missing sameAs entity links; missing FAQPage schema.
5. Platform Footprint & Agentic	2 / 10	10%	**FAIL**	Near-zero presence on Reddit/Wikipedia (Perplexity blindspot); no agentic API/UCP readiness.
TOTAL GEO INDEX	**36 / 100**	**100%**	**TIER 4**	**Vulnerable to omission, hallucination, and competitor displacement.**

3. Detailed Diagnostic Findings

Pillar 1: AI Ingestion & Crawlability (Score: 16/20)

• **Server-Side Rendering (SSR) Excellence:** The LiteSpeed web server delivers fully rendered HTML payloads (~164 KB) with headers x-turbo-charged-by: LiteSpeed. Unlike modern React/Vue Single Page Applications (SPAs), AI bots that do not execute client-side JavaScript (e.g. GPTBot, PerplexityBot) can read all primary text without issue.
• **Robots.txt Misconfiguration:** The current robots.txt allows general bots, but includes zero explicit declarations for real-time retrieval bots (OAI-SearchBot, PerplexityBot). Critically, it declares Sitemap: https://tekjee.com/sitemap.xml which only contains 1 URL.

Pillar 2: Machine Context & Protocols (Score: 1/20)

• **Missing /llms.txt & /llms-full.txt:** Both standard endpoints return HTTP 404 Not Found. AI agents must parse bloated HTML with inline CSS instead of ingesting high-efficiency Markdown context.
• **Sitemap Desynchronization:** The Rank Math SEO plugin generated a multi-index sitemap at https://tekjee.com/sitemap_index.xml (linking post-sitemap, page-sitemap, category-sitemap with 40+ URLs), yet robots.txt instructs all crawlers to inspect a dormant XML sitemap holding only the homepage.

Pillar 3: RAG Citation Architecture (Score: 12/30)

• **Inverted Pyramid Answering:** The homepage hero relies on abstract slogans (*'Creative Minds Working For You'* and a Mahatma Gandhi quote). AI search queries average 23 words and extract direct factual answers in the first 2-3 sentences. The delay in explaining Tekjee's exact services degrades RAG relevance scores.
• **Linguistic Authority & Typos:** Key metrics feature critical spelling errors: Increased Conversation Rates (instead of Conversion Rates) and Increased Trafic (with one 'f'). In dense retrieval vector models, typos severely degrade authority weighting.
• **Empirical Data Density:** Allen Institute / Princeton research demonstrates that pages containing verifiable statistics, benchmark percentages, and structured tables receive up to **+40% more AI citations**. Tekjee displays vague claims without hardware response times, false-alarm mitigation metrics, or SLA guarantees.
• **E-E-A-T Attribution:** Every article and service page credits **'admin'** as author. There are no state security licenses, ASIS credentials, or professional bios.

Pillar 4: Structured Knowledge & Entity Grounding (Score: 5/20)

• **Corrupted Schema Graph:** Inspection of the live JSON-LD generated by Rank Math reveals that the organization entity is explicitly typed as "name": "admin". There are no sameAs links connecting Tekjee to its LinkedIn, Facebook, Crunchbase, or Google Business profile.
• **Image Entity Mismatch:** The primary image entity for the home rich snippet points to /wpforms-lite/assets/images/submit-spin.svg (a spinning form loader icon).
• **Missing Schema Classes:** Service pages contain strong on-page FAQs but lack FAQPage structured data. The core offerings have no SecurityService or LocalBusiness schema markup.
• **Meta Description:** The homepage meta description is literally set to "support@tekjee.com".

Pillar 5: Platform Footprint & Agentic Readiness (Score: 2/10)

• **Perplexity Blindspot:** Perplexity AI sources up to 46.7% of citations from community discussions (Reddit, forums). Tekjee has zero organic presence on Reddit (e.g. r/cctv, r/securityguards, r/smallbusiness).
• **Agentic Protocols:** The site lacks structured OpenAPI or Model Context Protocol (MCP) endpoints, preventing autonomous procurement agents from discovering service packages or booking demos programmatically.

4. Prioritized Engineering Roadmap

■ P0: IMMEDIATE CRITICAL FIXES (Within 48 Hours)

1. Fix robots.txt & Sitemap Index:
Update robots.txt immediately to declare Rank Math's true sitemap index and authorize AI search bots:

```
User-agent: *
Allow: /
User-agent: OAI-SearchBot
Allow: /
User-agent: PerplexityBot
Allow: /
Sitemap: https://tekjee.com/sitemap_index.xml
```

2. Fix Rank Math Entity Identity:
Navigate to *Rank Math* > *Titles & Meta* > *Local SEO* and replace 'admin' with 'Tekjee Technologies'. Upload a high-resolution 1200x630 logo. Add social URLs under sameAs.

3. Fix Homepage Meta Description:
Replace support@tekjee.com with: *'Tekjee provides 24/7 real-time video surveillance monitoring, AI premises security, and custom digital software development across the United States.'*

■■ P1: HIGH-IMPACT STRUCTURAL OPTIMIZATIONS (Within 2 Weeks)

1. Deploy /llms.txt at Root:
Publish a clean Markdown file at https://tekjee.com/llms.txt containing a structured directory of Tekjee's services, co-founder details, and address for LLM context injection.

2. Inject FAQPage & Service Schema:
Add Schema.org FAQPage markup to /video-surveillance-monitoring-service/ to ensure its Q&As; are indexed as ground truth answers in Google AI Overviews and Perplexity.

3. Fix Typos & Add Inverted-Pyramid TL;DR Blocks:
Correct *'Increased Conversation Rates'* and *'Increased Trafic'*. Add a 3-bullet factual summary card directly beneath every H1 header with concrete response times (<60 seconds) and monitored facility types.

■ P2: STRATEGIC GROWTH & OFF-PAGE SIGNALS (Ongoing)

1. Author & Security Credential Verification:
Replace generic 'admin' bylines with verified executive profiles (Ibrahim Qadir, Umair Abbasi) including security contractor licenses and affiliations.

2. Seed Off-Page Discussion Footprint:
Publish technical case studies on Reddit (r/cctv, r/smallbusiness) comparing remote camera surveillance against physical guards. This directly satisfies Perplexity's citation algorithm.

3. Topical Authority Partitioning:
Cleanly separate the 'Physical Security & Video Surveillance' cluster from the 'Digital Agency & SEO' cluster to prevent search engines from becoming confused regarding Tekjee's primary domain expertise.
